To: Porter Robert <robert.porter@remcu.org>, rtabula@remcu.org

Greetings from Stero Medical center in Uganda. My name is Doctor ssempeera Benard the owner of this medical center. I established this medical center after seeing and going through many medical challenges which almost costed my life. throughout such a time a saw and mate many people with health challenges but yet did not have the money to pay in the hospitals for treatment.

This prompted me to set up this medical center to help the poor person who can not afford the expensive medical treatment in Uganda. we are a team of six doctors who had go through the same suffering and decided to set up six different health centers in different places basically to help the poor man.

I would love to appreciate internet for humanity in particular the president Mr. Robert Porter and the country director Mr. Tabula Robert for donating to us computers well connected to the internet. As matter of fact, this health center has transformed our medical center in a number of areas ever since we received these computers.

The areas of transformation include;

(1). Research

It is known that in the medical filed, a doctor has to be a researcher who tries to discover new medical ideas every day, I read medical books time to time to try update my self all the time. When these computers were donated to us, I and other doctors have made use of them through research. The cheap internet provided by internet for humanity which allows compressed browsing has indeed done well for us. thank you indeed.

(2). Data storage

For any living organization, record keeping is very important. we have leaved all years keeping our record on papers and in most cases we end up losing some. With the donation of these machines, we have developed a computerized system which allows us to store our patients data and and follow up on the progress of our patients on their health issues.

(3). communication made easy

Before receiving this system from internet for humanity, We used to move long distances to look for internet cafe order to be able to communicate to fellow doctors and of course doing day to day communications of life. we now no longer have to do this with this resource, God bless you internet for humanity and the entire donors of this Organization.

(4). computer literacy

computer and internet knowledge have become a must know to every one, but given the level of Uganda, only a small percentage have and can access this knowledge. Our doctors are now very excited because of these machine. we receive basic computer training from the internet for humanity representative Mr. Tabula Robert most of time. Our doctors are now counted among the computer literate people in Uganda. Thank you very much.

Cost Implication

Looking at the above benefits we have received from this system, we have been saved the burden of buying much stationery at the center because paper work has now reduced. we have diverted this saved money to work on other health issues in the health center

The other point is that we used to travel and spend money in expensive town computer cafes but now all that is saved for other purposes within the center.

In Uganda, if one chose to study computer in any computer institute, then they are going to spend a lot of money to have any certificate of computer. we study computer for free which ends up saving a lot of money for our doctors and other health workers.

In summary adding up all the money we save after using this system, it is a lot and this has been turned to finishing other health issues in our medical center.

Request

Like I mentioned from the begging, we are a team of 6 doctors and my friends have visited us and would love to have receive such a system and be able to have the saving that we are doing to also be able to save more life like we are doing.

Lastly, the medical challenges in Uganda are very many and the number of doctors are very few compared to the patient number. It is at this point that I write to request for any medical volunteer who may be willing to work in Uganda.

God bless you all
For God and My Country
Doctor Benard .S.
